

PRETTY IN INK

COLD SORE RELEASE

Client states that she HAS / DOES NOT HAVE (circle one) a history of cold sores (Herpes Simplex I). Client understands that the application of a cosmetic tattoo in the lip area may cause a cold sore outbreak in those who have Herpes Simplex I, whether or not they have ever experienced an outbreak before. Client has been advised that if she does have a history of cold sore outbreaks, she should obtain a prescription for Valtrex, Zovirax or some other prophylactic medication to reduce the likelihood that an outbreak will occur. Client understands that, in that case, she should begin taking the medication one day before the procedure.

Client agrees that she will not hold PRETTY IN INK or Stacey Byford responsible for any cold sore outbreaks that occur after the cosmetic tattoo procedure is performed.
